AI AWARENESS QUIZ – PART 2

Solved Answer Key | 50 Questions

Name: Rohit Sanjay Bagal

Batch: 9011 #Selected for Internship

Section A – AI Companies, Models & Tools

Llama is developed by which company?
Answer: Meta.

Gemini is developed by which company?
Answer: Google.

Claude is developed by which company?
Answer: Anthropic.

Grok is developed by which company?
Answer: xAI.

Mistral models are developed by which AI company?
Answer: Mistral AI.

Which company is associated with the GPT model family?
Answer: OpenAI.

Sora is mainly used for generating what type of content?
Answer: Videos from text prompts and other inputs.

Veo is an AI video-generation model associated with which company?
Answer: Google.

Midjourney is mainly used for what purpose?
Answer: Generating images from text prompts.

What is GitHub Copilot mainly used for?
Answer: AI-assisted coding, such as suggesting and explaining code.

Section B – Generative AI Concepts

What does LLM stand for?
Answer: Large Language Model.

What is Generative AI?
Answer: AI that creates new content, such as text, images, audio, or video.

What is a prompt in AI?
Answer: An instruction or input given to an AI model.

What is a system prompt?
Answer: An instruction that sets an AI model’s role, behavior, or rules.

What does multimodal AI mean?
Answer: AI that can process or generate more than one type of data, such as text, images, or audio.

What is an AI hallucination?
Answer: When an AI produces information that is false, fabricated, or unsupported.

What are tokens in an LLM?
Answer: Small units of text, such as parts of words, words, or punctuation, processed by the model.

What is an AI model's context window?
Answer: The amount of input and conversation content the model can consider at one time.

What does inference mean in AI?

Answer: Using a trained model to produce a prediction or response.

What is fine-tuning?

Answer: Further training a pre-trained model on specific data to adapt its behavior or performance.

Section C – AI for Developers & Applications

What is an AI agent?

Answer: An AI system that can pursue a goal by reasoning, using tools, and taking actions.

What is the main difference between a chatbot and an AI agent?

Answer: A chatbot mainly responds to messages; an agent can also use tools and take steps to complete tasks.

What is tool calling or function calling?

Answer: A model requests that an application run a defined tool or function to perform a task.

What does MCP stand for in modern AI development?

Answer: Model Context Protocol.

What is an API key used for when accessing an AI service?

Answer: To identify or authenticate an application when it accesses an API.

What is an API rate limit?

Answer: A restriction on how many API requests can be made within a specified period.

What type of AI product is Cursor?

Answer: An AI-powered code editor for software development.

What is NotebookLM mainly designed to help users work with?

Answer: Their provided sources and documents, by summarizing and answering questions about them.

What is semantic search?

Answer: Search that finds content based on meaning and context, not just exact keyword matches.

Name any three tasks where developers can use Generative AI productively.

Answer: Writing code, debugging errors, and generating documentation.

Section D – Image, Video, Speech, Models & Hardware

What is speech-to-text AI?

Answer: AI that converts spoken audio into written text.

What is text-to-speech AI?

Answer: AI that converts written text into spoken audio.

What does OCR allow a computer to extract from an image?

Answer: Text contained in an image or scanned document.

What is a vision model?

Answer: An AI model that analyzes visual inputs such as images or video.

What is meant by text-to-video AI?

Answer: AI that generates video based on a text description or prompt.

What is a diffusion model commonly used for?

Answer: Generating images and other content by progressively removing noise from data.

Why are GPUs widely used for AI workloads?

Answer: They perform many parallel calculations efficiently, which is useful for neural networks.

What is an NPU?

Answer: A Neural Processing Unit, a processor designed to accelerate AI tasks.

What does VRAM mainly store while running large AI models?

Answer: Model weights, intermediate activations, and other data needed for GPU computation.

What is meant by running an AI model locally?

Answer: Running the model on your own computer or device rather than relying on a remote service.

Section E – Advanced Awareness, Safety & Responsible AI

What is an open-weight AI model?

Answer: A model whose trained weights are made available for people to download and use, subject to its license.

What is model distillation?

Answer: A technique that trains a smaller model to reproduce useful behavior from a larger model.

What is LoRA commonly used for?

Answer: Parameter-efficient fine-tuning of a model by training a small set of additional parameters.

What does MoE stand for in AI models?

Answer: Mixture of Experts.

What is an AI benchmark?

Answer: A standardized test or dataset used to evaluate and compare model performance.

What is a guardrail in an AI application?

Answer: A rule or technical control that helps keep AI behavior within defined safety or quality limits.

What is prompt injection?

Answer: An attack that uses instructions in user input or external content to try to override an AI system's intended instructions.

What does PII stand for?

Answer: Personally Identifiable Information.

Why should confidential company data not automatically be pasted into public AI tools?

Answer: It could expose sensitive information or violate company policies, privacy requirements, or service terms.

If an AI-generated answer looks convincing, what should a user do before using it for an important decision?

Answer: Verify it against reliable sources and, when appropriate, consult a qualified person.
